You downloaded a CD image in a bin format. However, nothing will read it. Here's what you do.

You just downloaded the latest, baddest program from some torrent somewhere. However, it's just a bunch of bin files. You realize these are CD images or ISOs... but you don't know how to run them.

You just create a text file that is named the exact same thing as your bin file except with a cue extension. In this text file you need this information:

```
FILE "yourbinfilenamehere.bin" BINARY
TRACK 01 MODE1/2352
INDEX 01 00:00:00
```

Step-by-step:

Say you have a file called gameiso.bin

1. Right click on a blank space in the same folder
2. Select **new text document**
3. Double click to open your **New Text Document.txt**
4. Paste this into the file:

```
FILE "gameiso.bin" BINARY
TRACK 01 MODE1/2352
INDEX 01 00:00:00
```

*Make sure you edit **gameiso.bin** to the exact name of your bin file.*

5. Click **File** menu
6. Click **Save**
7. Click the **Red X** to close it
8. Right click the **New Text Document.txt** and select **Rename**
9. Rename it like your bin file except with a cue extension:
gameiso.cue
10. Now any program that can read CD-rom ISOs (nero, alcohol, etc) should be ready to read the file.
